## v4.22.0

### FEATURES:

- **New Data Source:** `azurerm_extended_location_custom_location` ([#28066](#))
- **New Resource:** `azurerm_system_center_virtual_machine_manager_virtual_machine_instance` ([#27622](#))

### ENHANCEMENTS:

- dependencies: `containers` - update API version to 2024-09-01 ([#28598](#))
- dependencies: `hashicorp/go-azure-sdk` - update to v0.20250227.1125644 ([#28902](#))
- dependencies: `signalr` - update API version to 2024-03-01 ([#28940](#))
- Data Source: `azurerm_container_app` - add support for the `template.volume.mount_options` property ([#28619](#))
- Data Source: `azurerm_storage_account_queue_properties` - now gets the parent account directly rather than searching the list of all accounts when the Resource Manager ID is available ([#28617](#))
- Data Source: `azurerm_storage_account_static_website` - now gets the parent account directly rather than searching the list of all accounts when the Resource Manager ID is available ([#28617](#))
- Data Source: `azurerm_storage_containers` - now gets the parent account directly rather than searching the list of all accounts when the Resource Manager ID is available ([#28617](#))

`azurerm_cdn_frontend_firewall_policy` - add support for the `log_scrubbing` property ([#28834](#))

- `azurerm_container_app` - add support for the `template.volume.mount_options` property ([#28619](#))
- `azurerm_container_app_job` - add support for the `template.volume.mount_options` property ([#28619](#))
- `azurerm_extended_custom_location` - deprecated in favour of `azurerm_extended_location_custom_location` ([#28066](#))
- `azurerm_mongo_cluster` - add support for the `connection_strings` attribute ([#28880](#))
- `azurerm_storage_account` - now gets the parent account directly rather than searching the list of all accounts when the Resource Manager ID is available ([#28617](#))
- `azurerm_storage_account_queue_properties` - now gets the parent account directly rather than searching the list of all accounts when the Resource Manager ID is available ([#28617](#))
- `azurerm_storage_account_static_website` - now gets the parent account directly rather than searching the list of all accounts when the Resource Manager ID is available ([#28617](#))
- `azurerm_workloads_sap_discovery_virtual_instance` - add support for the `managed_resources_network_access_type` property ([#28881](#))
- `azurerm_workloads_sap_single_node_virtual_instance` - add support for the `managed_resources_network_access_type` property ([#28881](#))
- `azurerm_workloads_sap_three_tier_virtual_instance` - add support for the `managed_resources_network_access_type` property ([#28881](#))

#### BUG FIXES:

- `azurerm_api_management_api` - split create/update methods ([#28271](#))
- `azurerm_express_route_circuit` - `allow_classic_operations` is now set when resource is created ([#28748](#))
- `azurerm_key_vault_certificate` - set partial when updating key vault certificate ([#28848](#))
- `azurerm_managed_disk` - always set `network_access_policy` into state to allow Terraform to detect drift ([#28934](#))
- `azurerm_mssql_managed_instance` - fix an issue that prevented using values only known during apply for `administrator_login_password` ([#28843](#))
- `azurerm_mssql_server` - prevent panic by removing function call on a value that may be unknown ([#28949](#))

### 4.21.1 (February 28, 2025)

---

#### BUG FIXES:

- `azurerm_mssql_server` - prevent panic by checking if `administrator_login` exists in the raw config map ([#28909](#))

#### BUG FIXES.

- azurerm\_mssql\_server - prevent panic by checking if administrator\_login exists in the raw config map ([#28909](#))
